

Case study Castlemead

PROJECT LOCATION

Bristol

PROJECT TYPE

Reception
& Basement
Refurbishment
in Occupied
Building

This project initially consisted of a full strip out of the reception area and basement of a fully operational 18 storey office building in central Bristol. This also included the full demolition of the large external canopy to the front of the building.

We then installed all new M&E services, walls, and flooring to both areas. The basement consisted of a state-of-the-art Bike area comprised of storage for over 300 bikes, lockers, showers and a bike repair station. Full stand out signage and decorations were also completed.

In the reception we installed a showstopping gold plated plaster wall along with an innovative app operated entry system and speed gates. A bespoke reception desk, feature lighting and elegant furniture and finishes completed the look.

Externally, we installed a new canopy and roof, granite paving and feature planting. This was a very well-executed project especially considering the many challenges associated due to heavy footfall from the occupants of the 18-storey building.
